Education

JSS Academy of Technical Education, Noida B.Tech in Electrical Engineering	2022 – 2026
--	-------------

Experience

Uttar Pradesh Power Transmission Corporation Limited (UPPTCL) <i>Intern</i>	July 2025 – August 2025
---	-------------------------

- Designed and tested the operation, protection and maintenance of **132kV and 220kV substations**.
- Observed real-time **SCADA dashboards** for grid monitoring, load management, and outage reporting.
- Assisted engineers during equipment inspections and testing of **CTs, PTs, transformers, and protection relays**.
- Supported shutdown procedures and maintenance workflows for transmission equipment.
- Prepared technical documentation and improved digital reporting using cloud-based tools.

Projects

AI-Based Fault Detection System for Power Infrastructure <i>Next.js, TypeScript, AWS, Amazon Bedrock, AWS Lambda</i> Live Project GitHub Repository	• Developed an AI-powered system to detect faults in power transmission lines and transformers. • Processed real-time sensor and historical grid data to identify anomalies. • Built a dashboard providing real-time alerts, root cause analysis, and predictive maintenance insights. • Integrated Amazon Bedrock models and serverless architecture using AWS Lambda and API Gateway. • Monitored parameters such as voltage fluctuations, impedance, harmonic distortion, and temperature patterns.
FSS.pvt — Personal Cloud Storage System (Private Drive) <i>Next.js, TypeScript, AWS S3, AWS SDK, AWS Amplify, AWS Route53, TailwindCSS, React Icons</i> Live Project GitHub Repository	• Built a personal cloud storage system similar to Google Drive for securely storing and managing files. • Implemented file upload, retrieval, and organization using Amazon S3 with AWS SDK integration. • Designed a secure interface using Next.js and TypeScript with a responsive UI built using TailwindCSS. • Deployed using AWS Amplify with domain management via Route53 for scalable hosting. • The system is designed as a private storage solution accessible only to the owner, not a public file-sharing platform like Google Drive.
Developer Feedback Platform <i>Next.js, TypeScript, PostgreSQL, Supabase, ORM</i> Live Project GitHub Repository	• Built a platform allowing users to submit feedback on projects, blogs, and portfolio content. • Designed relational database schema using PostgreSQL and implemented queries using Supabase ORM. • Implemented secure data handling, CRUD operations, and structured feedback storage. • Integrated the system into the personal portfolio ecosystem for real-time feedback collection.

Technical Skills

Frontend: React, Next.js, Vite, Tailwind CSS, Framer Motion
Programming: JavaScript, TypeScript
Cloud & DevOps: AWS (Lambda, EC-2, S3, IAM, Amplify, Route53, CloudFront, CloudTrail), Docker
Databases & Tools: Supabase, Git, GitHub, Postman
Libraries/Frameworks: Clerk Auth, React Icons, Shaden UI, Lucide React
AI/ML Integration: Amazon Bedrock

Certifications

- AWS Getting Started with Storage Services
- AWS Serverless Badge
- AWS Machine Learning Badge
